Treponema p17 22kDa

Treponema pallidum p17, 22 kDa Recombinant
VAG0491

Product Overview

Name	Treponema p17 22kDa

Description

Treponema pallidum p17, 22 kDa Recombinant

Introduction

Treponema pallidum is a gram-negative spirochaete bacterium and is considered to be metabolically crippled. There are at least four known subspecies: T. pallidum pallidum, T. pallidum pertenue, T. pallidum carateum and T. pallidum endemicum. The helical structure of T. pallidum pallidum allows it to move in a corkscrew motion through viscous mediums such as mucus. Treponema pallidum sub sp. pallidum has one of the smallest bacterial genomes at 1.14 million base pairs (Mb) and has limited metabolic capabilities, reflecting its adaptation through genome reduction to the rich environment of mammalian tissue.

Source

Escherichia Coli.

Physical Appearance

Sterile Filtered solution.

Formulation

Treponema p17 22kDa protein solution contains PBS 50mM arginine.

Stability

Treponema p17 22kDa protein although stable at 4°C for 1 week, should be stored below -18°C. Please prevent freeze thaw cycles.

Purity

Treponema p17 22kDa is >95% pure as determined by 10% PAGE (coomassie staining).

Applications

Immunoassay.

Precautions

Treponema p17 22kDa is for research use only and not for use in diagnostic or therapeutic procedures.
