FADD Human

Fas-Associated Death Domain Human Recombinant
RCP0822

Product Overview

Name	FADD Human
Description	
Fas-Associated Death Domain Human Recombinant	
Accession (Primary)	Q13158
Synonyms	
GIG3, MORT1, MGC8528, FADD, Fas (TNFRSF6)-associated via death domain, Protein FADD, FAS-associated death domain protein, FAS-associating death domain-containing protein, Mediator of receptor induced toxicity, Growth-inhibiting gene 3 protein.	
Introduction	
FADD is an adaptor protein that cooperates with a variety of cell surface receptors and mediates cell apoptotic signals. Using its C-terminal death domain, FADD is recruited by TNFRSF6/Fas-receptor, tumor necrosis factor receptor, TNFRSF25, and TNFSF10/TRAIL-receptor, and consequently it take parts in the death signaling initiated by these receptors. FADD interaction with the receptors reviels the N-terminal effector domain of, which allows it to recruit caspase-8, and thus initiate the cysteine protease cascade. Knockout studies in mice furthermore propose the significance of FADD in premature T cell development. FADD plays a role in survival/proliferation and cell cycle development. FADD also takes part in cellular sublocalization, protein phosphorylation, and inhibitory molecules.	
Source	
Escherichia Coli.	
Physical Appearance	
Sterile filtered colorless solution.	
Formulation	
The FADD protein solution contains 20mM Tris-HCl, pH-8, and 10% glycerol.	
Stability	
Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.	
Purity	
Greater than 95.0% as determined by SDS-PAGE.	
Amino acid sequence

Precautions

FADD Human is for research use only and not for use in diagnostic or therapeutic procedures.

Target Information: (Q13158)
