

FZD10 Human

Frizzled Class Receptor 10 Human Recombinant

RCP0884

Product Overview

Name	FZD10 Human
Accession(Primary)	Q9ULW2
Description	Frizzled Class Receptor 10 Human Recombinant

Target information (Q9ULW2)

Gene Name

About Gene Symbol

Background

Frizzled-10 (FZD10) is a member of the Frizzled family of G protein-coupled receptors (GPCRs) that play critical roles in the Wnt signaling pathway, which is essential for various developmental processes, cell proliferation, and differentiation. Recombinant human FZD10 (rhFZD10) has been developed to facilitate research into its biological functions and potential therapeutic applications, particularly in the context of cancer and regenerative medicine. This paper provides a comprehensive overview of the scientific research on recombinant human FZD10, focusing on its biological functionality, detailed description, and physical properties. Recombinant human FZD10 is primarily used to investigate the role of FZD10 in Wnt signaling and its implications in health and disease.
